

Highly-experienced specialists provide accurate and quick diagnosis and treatment.

Our physicians are specialists in the fields of endocrinology, diabetes, pulmonology, hematology, infectious diseases, and sleep medicine. Our focus is placed on diabetes management and sleep apnea in collaborating with cardiology and cardiac surgery departments.

We are the only institution in Chiba area with a polysomnography system that complies with Level 1, treating more than 650 patients. We also provide a large number of sleep apnea patients with CPAP devices for home care purposes and have introduced Adaptive Servo Ventilators for patients with heart failure.

Our team of specialists and allied health personnel provide comprehensive care for diabetic patients.

We place our therapeutic focus on diabetes patients who have cardiovascular complications with collaboration of the Department of Cardiology and Cardiovascular Surgery, making our team unique in the regional healthcare network.

Although a field of endocrine diseases encompasses a range of relatively uncommon disorders, we diagnose and treat these diseases of the hormone producing glands, where deficiency in the thyroid gland is particularly common. Endocrine surgery service has been developed within Department of Surgery and works very closely with our department.

within Department of Surgery and works very closely with our department.

"Open class of diet therapy for diabetes patients"
