

**Swift functional recovery while minimizing pain
We strive to meet patients' needs through continuous improvement,
competence, creativity and team work.**

The Department of Orthopedic Surgery is committed to deliver the highest quality of diagnosis and patient care for a diverse spectrum of musculoskeletal disorders, including total joint replacement surgeries, spine surgeries and fracture surgeries. To this end, we strive to meet the needs of 21st century medical care not only by integrating the latest diagnostic and technological advancements in orthopedic science, but also by establishing collaboration with other medical and allied medical specialties and with academia. We plan sizable expansion of our service in the area of arthroscopic and open shoulder surgeries, hand, hip, and knee surgeries within 2 years.

The Section of Rehabilitation Medicine aims to enhance and restore functional ability, level of independence and quality of life of patients by optimizing their function through the combination of pain alleviation, life style change, physical modalities and training, adaptive equipments, and orthotics and prostheses. We plan to start cardiac rehabilitation

program with collaboration of Cleveland Clinic to benefit our cardiac patients.

We value the needs of patients and their families and provide broad spectrum of treatment approaches.
